Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. "The securing of the planar object" lacks a proper antecedent in claim 1.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 5-6, 8-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Becker 2806492) in view of Sutter (4593893). Becker discloses method of trimming a planar object plate 4 comprising:

applying a decorating pattern, that includes an alignment line 15 to the planar object 4 positioning the planar object 4 on a trimming table device, shown figures 5-7, wherein the trimming table device comprises a base 10, an adjustment table by means of element 14, an alignment edge 6, an reader 7b/d and a movable saw 11;

Art Unit: 3633

moving the planar object 4 over the adjustment table until an edge of the planar object 4 abuts the alignment edge 6;

Becker moves the object using a different method in order for the reader to locate the alignment line. The recited method step is not seen as critical to the invention. Moving the adjustment table over the base until the optical reader locates the alignment line is an optional method of advancing the workpiece or planar object; one of ordinary skill in the art would have appreciated all of the known methods and would have selected any known method commensurate with the process; and Becker discloses

trimming the planar object with the movable saw 11 while the adjustment table is held stationary.

Becker discloses securing the object 4 to the table prior to trimming the object by the feeding mechanism

Becker the adjustment table and the first saw 11 are movably coupled to the base 10 and the alignment edge.

Becker discloses the trimming of the planar object is performed by displacing a cutting saw relative to the planar object

Becker discloses moving the adjustment includes actuating a motor that is coupled to the adjustment table 10. It is obvious and inherent that in order to run the movable saw the same is performed and coupled to a motor in order to function. Additional saws function also by motors coupled thereto.

Becker discloses the trimming of the planar object includes displacing the saw along an edge of the planar object.

It would be obvious trim the second edge by moving the workpiece along the table or to add an additional saw to cut additional edges. Sutter discloses several saws and motors needed to perform more than one cutting operation. It would have been obvious to one of ordinary skill in the art to modify Becker to include as many saws and motors as needed perform additional

Art Unit: 3633

cutting an trimming operation as shown by Sutter.

Becker lacks the optical reader as that shown by Sutter. It would have have been obvious to employ the optical reader of Sutter in order to form a more accurate and precise cut to the work piece

Becker does not employ securing the planar object to the adjustment table with a plurality of suction discs. The securing method has been considered a matter of choice. One of ordinary skill in the art would have appreciated using any known method of securing the workpiece or planar object. The method of suction disc has not been considered critical to the method of the invention

Claim 7 is objected to as depending upon a rejected base claim but would be considered allowable if amended to include the base claim and any intervening claims.

Applicant's arguments are moot in view of the new ground of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control Number: 10/729,613 Page 5

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chapman E. Jeanette whose telephone number is 571-272-6841. The examiner can normally be reached on Mon.-thursday, 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, CHILCOT RICHARD can be reached on 571-272-6777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
